

Phone Recorder System

Phone Recorder

Phone Recording or Voice Logging has been around for nearly as long as phones. It consists of attaching a recording device to phone, radio or audio lines and having a way of playing back these recordings. Call centers were early adapters and most of us are familiar with the little recording at the beginning of a call that reminds us that " this call maybe recorded for training or quality assurance purposes."

Features

- It can record analog, digital extension, VOIP, T1, E1 or ISDN phone line, Radio or any other type of audio channel.
- Recordings are saved on a hard drive and can be back-up to archive media such as DVD+RW, network or external drive.
- Live call as well as past recording can be accessed over a LAN or over the Internet.
- All call in number (With Caller ID) and call out number will be recorded
